Manual Licensing Press to recive the challenge file. Send this file to Enei, ins. Set Genuine file Set Genuine file Select the file that Enei gave you and upload it. Backup to scheme You can save current state of the roulette to file. Use this file to restore later. Press to restore from a previously created backup. All current data will be lost. Press to restore from a previously created backup. All current data will be lost.			
		All current data will be lost. You can also restore only from ".sql script. This kind of scripts can restore only counters and configuration.			
PDPE version 3.6.1 Caps: Off Scroll: Off Num: On 21.03.12.03.13.07					

If a new version exists Pope will download it automaticaly.

Just confirm with Yes to install the update now and follow the on screen instructions(ussualy pressing 'Next', 'Install', 'Finsh'). Check if the update was successful by comparing new version number to the old one...

Note: If you experience problems with 'Check for updates...' or the auto update does not work.., please download Pope update manualy from: ftp://ftp.4knh.com/enej/popelast/PopeUpdate.exe

Note: If you do not have Pope already installed you can install it by downloading installation package from:

ftp://ftp.4knh.com/enej/popelast/PopeInstall.exe

The installation may also need an update, so after installing allways do a 'Check for updates..', or manually update..

Step2: Connect to roulette by pressing [+] sign. Enter password on Pope authentication dialog.

Step3: After successful login, double click on 'Administration'. On top select 'Page2' . Download current screensaver image by pressing the button 'Get Current Screensaver'. A dialog will pop up asking you where to save the file. Select a folder of your choice(ussualy Desktop..); you may leave the filename as suggested RouletteScreensaver.png and click 'Save'.

Step4: Open the downloaded file(<u>\\Desktop\RouletteScreensaver.png</u>) with an image editor of your choice. I use CorelPhoto Paint(but also Adobe Fireworks or Photoshop or GIMP will do). Change the image so that you do not change the format and width or height. Save the file. You can even change filename, just make sure to save the image in same format as source(IT MUST BE PNG 24BIT!! - Check image format with windows right click->properties->Summary).

Roulette nsaver	Preview Edit Preview Print Delete with wiping	
ancaIT	Open With > SourceGear DiffMerge > CVS > Add to archive > Add to "RouletteScreensaver.rar" Compress and email Compress to "RouletteScreensaver.rar" and email	 Microsoft Office Picture Manager Windows Picture and Fax Viewer Corel PHOTO-PAINT Internet Explorer C++ Builder Development Environment Paint Choose Program
	Send To Cut Copy Create Shortcut Delete Rename Properties	PE version 3.6.1

Note: Screensaver slides are stored all in one image file. The file is N*1024pixels in width and 768 pixels in height; where N is the number of slides in screensaver. You may change number of slides, just make sure that your new image width is a multiple of 1024. So, slides begins with pixels: 0(slide1), 1024(slide2), 2048(slide3), 3072(slide4),... Number of slides is limited to below 20 slides.

Step5: Upload the new created file back to roulette by pressing 'Set New Screensaver'. A file select dialog will appear; use it to pick the file you just created (<u>\\Desktop\RouletteScreensaver_NEW.png</u>). Click Open to select the file. Wait for the transfers to complete(a few black windows will appear and close automaticaly).

Step6: Restart playboards by selecting Administration->Page1->RestartStations. Wait for playboards to restart or manualy cycle power. !!To check the screensaver you must payout all credits on one station and wait about 2 minutes for screeensavers to begin!!

Step7: Restart from Step3 to correct if something went wrong...

Note: Similar procedure applies for customizing LoadingSplash image. Just Press 'Get Current Loading Splash', modify the image and put it back on roulette with 'Set New Loading Splash'. Wait for the transfer to complete(black window closes – transfer should finish in few seconds) and click 'Retry'.
